        - '--args=--only=terraform_required_providers'
        - '--args=--only=terraform_standard_module_structure'
        - '--args=--only=terraform_workspace_remote'
```

```
- repo: https://github.com/pre-commit/pre-commit-hooks
  rev: v4.4.0
  hooks:
    - id: check-merge-conflict
    - id: trailing-whitespace
    - id: check-yaml
    - id: detect-private-key
    - id: check-added-large-files
```

azure-pipelines.yml

for ADO pipelines

backend.tf

remote state files location and other providers

```
backend "azurerm" {
  subscription_id      = "bb759f2e-505c-4524-9e64-8bfae839b384"
  resource_group_name = "rg-ccoe-iac-cc-sbx"
  storage_account_name = "saccoeiacccsbx"
  container_name       = "terraform"
  key                  = "template/terraform.tfstate"
}
```

terraform.tfvars

Automatically loaded by terraform, per environment variables as an example:

```
app_env      = "sbx"
app_vnet     = "vnet-ba-cc-sbx-app"
app_vnet_rg  = "rg-ba-cc-sbx-app-network"
app_snet     = "snet-ba-cc-sbx-app-frontend"
app_rg       = "rg-example-cc-sbx"
iac_rg       = "rg-ccoe-iac-cc-sbx"
iac_kv       = "kv-ccoe-cc-sbx"
iac_st       = "stccoeiacccsbx"
```

.git

for git/ADO/github purpose

docs

project related some documents, ISAD and architecture designs

reference

some reference docs, links and articles

modules

for terraform modules

scripts

for automation scripts, including shell/powershell/ansible scripts etc

files

for support files. like ssh key, certificates
